                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAR13539 standard; protein; 461 AA
                                                                                                                                                                                                                             protein C Zymogen LIN comprises a signal peptide and propeptide of a gamma-carboxylated secreted protein, the light chain of HPC, a basic dipeptide (i.e. Lys-Arg, but can also be Arg-Lys, Lys-Gr Arg-Arg) and amino acid residues 200-461 of HPC but with Asp (214) replaced by Asn. The zymogen can be activated in vivo by thrombin alone (even in the presence of calcium) and is more susceptible to activation by thrombin/thrombomodulin than native HPC zymogen. Zymogen LIN can be thrombin/thrombomodulin than native HPC zymogen. Zymogen tin can be administered as a pro drug useful in prevention and treatment of diseases involving intravascular coagulation. It can also be given to thrombocytopenic patients with invasive cancers with effective and intensive chemotherapy. See ARR13537-40 and ARR13623. (Updated on 09-JAN-2003 to add missing OS field.)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     200
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   10
The present invention relates to a human protein C derivative. The protein is useful for treating vascular occlusive disorders, CC hypercoagulable states such as sepsis, disseminated intravascular coagulation, purpura fulminans, major trauma, major surgery, burns, adult CC respiratory distress syndrome, transplantation, deep vein thrombosis, CC heparin-induced thrombostopenia, sickle cell disease, thalassemia, viral hemorrhagiz fever, thrombotic thrombosytopenia, sickle cell disease, and hemolytic CC uremic syndrome, and also useful for treating thrombotic disorders and acute coronary syndromes such as myocardial infarction, unstable angina, and stroke. Protein C derivatives with amino acid substitutions result in circeased resistance to inactivation by serpins when compared to wild-crype activated human protein C. They also have longer half-lives in human blood and hence require either less frequent administration and/or smaller dosage than wild type human protein C for treating disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protein C; human; vascular occlusive; burn; transplantation; deep vein thrombosis; sickle cell; thalassemia; thrombotic disorders;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human protein C derivative 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAB36896;

CC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to copylopptide moiety (II) (e.g. an N-glycosyl group) covalently attached to compress of a protein C polypeptide (III) in at least one controduced and/or at least one removed amino acid sequence which differs controduced and/or at least one removed amino acid residue comprising an controduced and/or at least one removed amino acid residue comprising an control of the sold protein (IV) in at least one state). Also included are (I) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least control of the surface, with the proviso that the comprising that the substitution is not fhr24sSer/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (C) gry202Ser/Ala/Thr/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC Tyr202Ser/Ala/Thr/His/Jys/Arg/Asn/Asp/Glu/Gly/Gln, (Z) a mucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (5) increasing (M2) the functional in vivo halfcress special conjugates, wariants for the treatment (and conjugates have an increased in conjugate and alpha-1 conformation of stroke, myocardial infarction such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased serum half-life, increased resistant to inhibitors, reduced conjugates have an increased in vivo half-life.

Conformation control of advantages over the currently available conformation languages over the currently available included in the conjugate offers a number of advantages over the currently available conformation duration between infections.
                                                                                                                                                                                                                                      Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Andersen KV,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a conjugate (I) comprising at least one non-
                                                                                                                                                                                                                                                                                                                                                                                                                                                 APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 419 AA;
                                                                                                                                                                                                                                                                                                                         Local

Example 5; Page; 92pp; English

CC comprising (V) or (VI), (S) increasing (VZ) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The CC compugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and C diagnosis/prevention) of stroke, myocardial infarction, after venous CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 cc increased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreases, reduced immunogenicity and/or increased bloavailability. CC The conjugates protein, and fewer side effects. Moreover, a cc defining while maintaining the antiinflammatory activity of APC products, including longer duration between injections. Or administration of less protein, and fewer side effects. Moreover, a cc protein C vertein C conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is conjugate to the invention. Note: The present sequence is not conjugate has an extended plasma life. The gene for protein a zymogen containt of the invention of the sequence is not conjugate. attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (5) increasing (VX); the functional in vivo half-The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an amino acid residue comprising an introduced and/or at least one removed amino acid residue comprising an introduced and/or at least one removed amino acid residue comprising an introduced and/or at least one removed amino acid residue comprising an introduced and/or at least one removed amino acid residue comprising an introduced and/or at least one removed amino acid residue comprising an introduced and/or at least one removed amino acid residue comprising an introduced and/or at least one removed amino acid residue comprising an introduced and/or at least one removed amino acid sequence which differs to a comprising an introduced and/or at least one removed amino acid sequence which differs to a comprising an amino acid sequence which differs to a parent protein C polypeptide (III) in at least one introduced amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising and acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which differs to a comprising an amino acid sequence which are comprising an amino acid sequence which are comprising an amino acid sequence which are comprising an am attached to

(MAXY-) (MAXY-) MAXYGEN APS MAXYGEN HOLDINGS LTD

Andersen KV, Pedersen AH, Freskgaard PO;

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English

The invention relates to a conjugate (I) comprising at least one non-cc polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs CC from that of a parent protein C polypeptide (III) in at least one cc introduced and/or at least one removed amino acid residue comprising an CC extachment group for the non-polypeptide group (e.g. an N-glycosylation CC extachment group for the non-polypeptide group (e.g. an N-glycosylation CC extractivation in a position (P) where (P) is an amino acid with at least CC substitution in a position (P) where (P) is an amino acid with at least CC extractivation is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Gln/Cly/Cln, CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Gln/Gly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Gly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Gln/Cly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Gln/Cly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Gln/Cly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Gln/Cly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Gln/Cly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Gln/Cly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Cln/Cly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Tys/Arg/Asn/Asp/Cln/Cly/Cln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/CC Tyr3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as ANU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, prespancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 419 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
life or the serum half-life of a parent protein C polypeptide. The
conjugates, variants and protein C proteins are useful as medicaments,

When activated, they have higher amidolytic and anticoagulant activity than the native form and opt. increased affinity for thrombin. E. coli KI2 AGI/pLPC-Q329 (NRRL B-18611) was obtained contg. the gene coding for the Aen-371-Gln mutation. pLPC-Q329 was recovered to transform 293 cells which were cultured to produce the zymogen mutant. The mutant had an amidolytic activity of 47 units/mg and anticoagulant activity of 516 units/mg compared to 35 units/mg and 325 units/mg respectively for wild-type activated HPC. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide
The zymogen forms of HPC represented in AAR13582, AAR13584, AAR13585 and AAR13597 have altered glycosylation patterns due to site-directed changes in the native HPC gene encoding the amino acid sequence. When activated, they have higher amidolytic and anticoagulant activity than the native
                                                                                                                                                                                                       23-FEB-1990;

E. coli K12 AG1/pLPC-Q097 (NRRL B-18608) was obtained contg. the gene coding for the Asn-139-Gln mutation. pLPC-Q097 was recovered to transform 293 cells which were cultured to produce the zymogen mutant. The mutant had an amidolytic activity of 32 units/mg and anticoaggilant activity of 303 units/mg compared to 35 units/mg and 325 units/mg respectively for wild-type activated HPC. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 461 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The zymogen forms of HPC represented in AAR13582, AAR13584, AAR13585 and AAR13997 have altered glycosylation patterns due to site-directed changes in the native HPC gene encoding the amino acid sequence. When activated, they have higher amidolytic and anticoagulant activity than the native form and opt. increased affinity for thrombin. E. coli K12 AG1[pLPC-Q313 (NRRL B-18610) was obtained contg. the gene coding for the Aan-355-Gln mutation. pLPC-Q313 was recovered to transform 293 cells which were cultured to produce the zymogen mutant. The mutant had an amidolytic activity of 52 units/mg and anticoagulant activity of 627 units/mg compared to 35 units/mg and 325 units/mg respectively for wild-type activated HPC. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Region

25-MAR-2003
01-NOV-1991
                     AARI3997 have altered glycosylation patterns due to site-directed changes in the native HPC gene encoding the amino acid sequence. When activated, they have higher amidolytic and anticoagulant activity than the native form and opt. incresased affinity for thrombin. E. coli Kl2 AGI/pLPC-Q248 (NRRL B-1869) was obtained contg. the gene coding for the Asn-248-Gln mutation. pLPC-Q248 was recovered to transform 293 cells which were cultured to produce the zymogen mutant. The mutant had an amidolytic activity of 63 units/mg and anticoagulant activity of 669 units/mg and compared to 35 units/mg and 325 units/mg respectively for wild-type activated HPC. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Homo sapiens

```
cc attachment group for the non-polypeptide group (e.g. an N-glycosylation co site). Also included are (1) a variant (IV) of [II] comprising a substitution in a position (P) where (P) is an amino acid with at least cc substitution in a position (P) where (P) is an amino acid with at least cc substitution in a position (P) where (P) is an amino acid with at least cc substitution is not Thr245Ser/Ala/His/Lyg/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (W); (4) a host cell (VII) (C) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-cc life or the serum half-life of a parent protein C polypeptide. The cc onjugates, variants and protein C proteins are useful as medicaments, conjugates, variants and protein C proteins are useful as medicaments, cc adiagnosis/prevention) of stroke, myocardial infarction, after venous ct thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow creations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide

                                                                                                                                                                                                                        transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Activation_peptide
```

APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Mote: The greent sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attache
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 9; Page; 92pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2002-489875/52.
                                                                                                                                                                                                                                                                                                                                                                                                                          located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-JUN-2001;
                                                                                                                                                                                                                                                                                                                                                                         Sequence 419 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DIC;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          360
```

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

```
Claim 9; Page; 92pp; English
```

The invention relates to a conjugate (I) comprising at least one non-cc polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to cap protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one cintroduced and/or at least one removed amino acid sequence which differs c attachment group for the non-polypeptide group (e.g. an N-glycosylation CC site). Also included are (1) a variant (IV) of (III) comprising an substitution in a position (P) where (P) is an amino acid with at least CC substitution is not Thr24Ser/Ala/His/Hys/Arg/Asn/Asp/Glu/Gly/Gln, (CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or ph316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Ph316Ser/Ala/Thr/CC (TV); (3) an expression vector (VI) comprising (V) a host cell (VII) CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-CC conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments for the treatment (and confidence of medicaments). CC diagnosis/prevention) of stroke, myocardial infartation, after venous cd diagnosis/prevention) of stroke, myocardial infartation (DIC), sepsis, septic cd thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic cd stock, emboli e.g. pulmonary emboli, transplantation such as bone marrow cd transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 cd antitrypsin. The conjugates have an increased in vivo half-life, increased in vivo half-life, renal clearance, reduced immunogenicity and/or increased bloavailability. The products, including longer duration between injections, cadministration of less protein, and fewer side effects. Moreover, a creduced anticoagulant activity is beneficial to reduce the risk of pleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is conjugate as a extended plasma life. The gene for protein C is shown in the specification but was created by the indexer using the conjugate as an annearing as an animanol and the indexer using the conjugate as an animal care and the indexer is not constant of the invention but was created by the indexer is not laim 4 constants in camerance ampearing as an animal and the information in claim 4 protein C sequence appearing as AAU99002 and the information in claim 9 419 AA;

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English

polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an CC attachment group for the non-polypeptide group (e.g. an N-glycosylation substitution in a position (P) where (P) is an amino acid with at least CC site). Also included are (I) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC state of the group exposed to the surface, with the provise that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/TC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) The invention relates to a conjugate (I) comprising at least one non-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic (C shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an artitrypsin. The conjugates have an increased in vivo half-life, increased antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced (C renal clearance, reduced immunogenicity and/or increased bicavailability. The conjugate offers a number of advantages over the currently available (C APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC pleding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the antiinflammatory activity of APC pleding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the antiinflammatory activity of the conjugate of the risk of bleeding while maintaining the conjugate of the risk of the conjugate of the risk of the conjugate of the risk of the conjugate of the risk of the risk of the conjugate of the risk of the conjugate of the risk of the risk of the risk of the risk of the risk of the risk of the risk of the risk of the risk o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2913-914. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 419 AA;

```

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-cc comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-cc comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-cc conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and cand in the manufacture of medicaments for the treatment (and chargosis/prevention) of stroke, myocardial infarction, after venous (cc diagnosis/prevention) of stroke, myocardial infarction, after venous (cc thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow (cc transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an (cc increased resistance to activation by e.g. human plasma and alpha-1 (cc antitrypsin. The conjugates have an increased in vivo half-life, increased complete (and complete attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln.
Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or bhe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an The invention relates to a conjugate (I) comprising at least one nonattached to

This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human protein C.

```

gland of a host female animal; and (b) using the DNA construct to breed transgenic animal (esp. sheep, rabbit, cattle, goat) that produces protein C in its milk, at least 90% of the protein C being in the two-chain form. Modification of the protein C two-chain cleavage site (see AAW25085) improves the maturation of recombinant protein C from single producing recombinant human protein C in the milk of a transgenic animal involves: (a) providing a DNA construct comprising DNA encoding a secretion signal and a protein C propeptide, operably linked to DNA encoding two-chain cleavage site-modified protein C, the 2 DNA sequences being linked to elements required for protein C expression in a mammary Disclosure; Page 58-60; 99pp; English This polypeptide comprises human protein C. A claimed method for producing recombinant human protein C in the milk of a transgenic animal chain to two-chain ρι

Sequence 460 AA;

cc site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the cc substitution is not Thr24Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (T) a not Thr24Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (T) a nucleotide sequence (V) encoding (C (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C comprising (V) or (VI); (5) increasing (V) the functional in vivo half-CC (Ife or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and CC diagnosis/prevention) of stroke, myocardial infarction, after venous chook, emboli e.g. pulmonary emboli, transplantation such as bone marrow matter accordance and the marrow matter than the marrow and the marrow and the marrow matter than such as bone marrow contents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WO200232461-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             bone marrow transplantation; major surgery; trauma; ARDS; coagulant; adult respiratory distress syndrome; alpha-1 antitrypsin; mutant; mutein.
                       transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bovavilability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an oacid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-OCT-2000; 2000DK-00001560.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the

cc attachment group for the mon-polypoptide group (e.g. an N-glycosylation cc site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least cc substitution in a position to the surface, with the proviso that the constitution is not Phr245Ser/Ala/His/Nry/Ary/Arn/Asp/Glu/Gly/Gln, (2) a muclaotide sequence (V) encoding cc Tyr302Ser/Ala/Thr/His/Iys/Ary/Ash/Asp/Glu/Gly/Gln, (2) a muclaotide sequence (V) encoding cc (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) cc (C); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) cc (C); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) cc (C); (3) an expression vector (VI); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (5) increasing (M2) the functional in vivo half-cc (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II); (II)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      18-OCT-2000; 2000DK-00001560.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WO200232461-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (MAXY-)
                                                                                                                       The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced remain clearance, reduced immunogenicity and/or increased bioavailability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptide moiety (II) (e.g. an N-glycosyl group) covalently atta
a protein C polypeptide comprising an amino acid sequence which di

CC diagnosis/prevention) of stroke, myocardial infarction, after venous continuous is prevention) of stroke, myocardial infarction, after venous composis, emboli e.g. pulmonary emboli, transplantation such as bone marrow contractory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced confidences of conjugates have an increased in vivo half-life. The conjugates have an increased in vivo half-life, confidence of advantages over the currently available apoptation including longer duration between highering available apoptation including longer duration between highering available confidence anticoagulant activity is beneficial to reduce the risk of the conjugate has an extended plasma life. The gene for protein C incated on chromosome 2q13-q14. The present sequence represents a zymogen considered containt of the invention. Note: The present sequence is not confident confidence appearing as AAUS9002 and the information in claim 9 tx

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 419 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           located on Chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Local Similarity

Š Pedersen AH, Freskgaard PO;

WPI; 2002-489875/52.

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

맑 20 망 Ŕ 밁 8

attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the substitution is not Thr24Sser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a mucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, polypeptide moiety (II) (e.g., an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an The invention relates to a conjugate (I) comprising at least one non-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC [activated protein C] conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 419

OSS XX REFERENCE XX REFERENCE FOR XX REFERENCE FOR THE FERENCE AND A CONTROL OF THE FERENCE FOR THE FERENCE FO

attached to protein C polypeptide comprising

Claim 9; Page; 92pp; English.

cc 25% of its side group exposed to the surface, with the provise that the cc 25% of its side group exposed to the surface, with the provise that the cc substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, CTyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C comprising (V) or (VI); (5) increasing (V2) the functional in vivo half-cc life or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and C and in the manufacture of medicaments for the treatment (and C diagnosis/prevention) of stroke, myocardial infarction, after venous CC thrombosis, disseminated intravascular coapulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an C increased resistance to activation by e.g. human plasma and alpha-1 CC antitrypsin. The conjugates have an increased in vivo half-life, continuate offere a number of advantance over the currently availability. The conjugates have an increased in vivo half-life, antitrypsin. The configuates have an increased in vivo half-life, antitrypsin. The configuates have an increased in vivo half-life, antitrypsin. The configuates have an increased in vivo half-life, antitrypsin. The configuates have an increased in vivo half-life. attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC The invention relates to a conjugate (I) comprising at least one nonintroduced and/or at least one removed amino acid residue comprising an

The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                  sepsis; septic shock; embolism; pulmonary embolism; burn; pregnancy;
bone marrow transplantation; major surgery; trauma; ARDS; coagulant;
adult respiratory distress syndrome; alpha-1 antitrypsin; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                            serum half-life; chromosome 2q13-q14; stroke; myoca; after venous thrombosis; disseminated intravascular
                                                                                                                                                                                                                                                                                                                                                                                                                                               Human Protein C zymogen protein mutant D214A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAU99095 standard; protein; 419

The invention relates to a conjugate (I) comprising at least one nonce of a protein c polypeptide comprising an amino acid sequence which differs that of a parent protein c polypeptide (III) in at least one introduced and/or at least one removed amino acid sequence which differs c from that of a parent protein c polypeptide (III) in at least one attachment group for the non-polypeptide group (e.g. an N-dycosylation cost pits). Also included are (1) a variant (IV) of (III) comprising an amino acid with at least the cost of the sits of group exposed to the surface, with the proviso that the cubit of the sits of group exposed to the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the cubit of the surface, with the proviso that the conjugates for the treatment (and cubit of the surface) and the manufacture of medicaments for the treatment (and cubit of the manufacture of medicaments for the treatment (and cubit of the manufacture of medicaments for the treatment (and cubit of the manufacture of medicaments for the treatment (and cubit of the manufacture of medicaments for the treatment (and cubit of the manufacture of medicaments for the treatment (and cubit of the manufacture of medicaments for the treatment (and cubit of the manufacture of medicaments for the treatment (and cubit of the manufacture). The variant protein cubit of the surface of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the subject of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18-OCT-2000; 2000US-0242268P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   멅
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human protein C derivative 5.
          hypercoagulable states such as sepsis, disseminated intravascular coagulation, purpura fulminans, major trauma, major surgery, burns, adult respiratory distress syndrome, transplantation, deep vein thrombosis, heparin-induced thrombocytopenia, sickle cell disease, thalassemia, viral hemorrhagic fever, thrombotic thrombocytopenic purpura, and hemolytic uremic syndrome, and also useful for treating thrombotic disorders and acute coronary syndromes such as myocardial infarction, unstable angina, and stroke. Protein C derivatives with amino acid substitutions result in increased resistance to inacrivation by corries when communications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein C; human; vascular occlusive; burn; transplantation; deep vein thrombosis; sickle cell; thalassemia; thrombotic disorders;

CC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to golypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to Cf a parent protein C polypeptide (III) in at least one controlled an amino acid sequence which differs introduced and/or at least one removed amino acid sequence which differs cattachment group for the non-polypeptide (III) in at least one controlled are (1) a variant (IV) of (III) comprising an estatachment group for the non-polypeptide group e.g. an N-glycosylation (2) substitution in a position (P) where (P) is an amino acid with at least the substitution is not "hri-45er/hla/His/Lys/Arg/Asn/Asp(dl), (IV) of (III) comprising a (IV), (I) an expression vector (IV) an unclectide sequence (V) encoding (IV), (I) an expression vector (IV) comprising (V); (A) a host cell (IVI) (CC life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosts, disseminated intravascular coagulation (DIC), sepsis, septic respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced immunogenicity and/or increased bioavailability. CC remain clearance, reduced immunogenicity and/or increased bioavailability. CC administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintening the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein a zymogen cc shown in the specification but was created by the indexer using the protein C sequence appearing as ANU99002 and the information in claim 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic coshock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 cantitypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced correnal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available corporducts, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of Diedding while maintaining the antinfilammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gener for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic the coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic the coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (DIC), sepsis, septic coagulation (D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Movel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 9; Page; 92pp; English.

```

polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation).

The invention relates to a conjugate (I) comprising at least one non-

sequence which differs

Human, Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC;

Human Protein C zymogen protein mutant S304N/R306T

23-AUG-2002 (first entry)

sepsis; septic shock; embolism; pulmonary embolism; burn; pregnancy; bone marrow transplantation; major surgery; trauma; ARDS; coagulant; adult respiratory distress syndrome; alpha-1 antitrypsin; mutant; mutein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc increased serum half-life, increased resistant to inhibitors, reduced cc renal clearance, reduced immunogenicity and/or increased bioavailability. Cf the conjugate offers a number of advantages over the currently available apropriets, including longer duration between injections, can definistration of less protein, and fewer side effects. Moreover, a creduced anticoagulant activity is beneficial to reduce the risk of the conjugate maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is colorated on chromosome 2013-014. The present sequence represents a zymogen comprotein C variant of the invention. Note: The greenst sequence is not confident on the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 kx

Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding
(IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII)
comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
life or the serum half-life of a parent protein C polypeptide. The
conjugates, variants and protein C proteins are useful as medicaments,
and in the manufacture of medicaments for the treatment (and
diagnosis/prevention) of stroke, myocardial infarction, after venous
thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic
shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow
transplantation, burns, pregnancy, major surgery/trauma or adult
respiratory distress syndrome (ARDS). The variant protein C has an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches 417; Conservative

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

WPI; 2002-489875/52.

Claim 9; Page; 92pp; English.

The invention relates to a conjugate (I) comprising at least one nonpolypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to
a protein C polypeptide comprising an amino acid sequence which differs
from that of a parent protein C polypeptide (III) in at least one
introduced and/or at least one removed amino acid residue comprising an
attachment group for the non-polypeptide group (e.g. an N-glycosylation
site). Also included are (1) a variant (IV) of (III) comprising an
substitution in a position (P) where (P) is an amino acid with at least
Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding
(IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII)
comprising (V) or (VI); (5) increasing (W2) the functional in vivo halflife or the serum half-life of a parent protein C polypeptide. The
conjugates, variants and protein C proteins are useful as medicaments,
thrombosis/prevention) of stroke, myocardial infarction, after venous
thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic
shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow
transplantation, burns, pregnancy, major surgery/trauma or adult

This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, reduced anticoagulant activity is beneficial to reduce the risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 419 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The conjugate offers a number of advantages over the currently available
                                                                                                                                                                                                                                                         Human Protein C zymogen protein mutant S216N/K218T
                                                                                                                                                                                                                                                                                                                                                                                        AAU99020 standard; protein; 419 AA

csubstitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the CC substitution is not 'fir245Ser/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln, CC Tyr302Ser/Ala/Th/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln, CC Tyr302Ser/Ala/Th/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (V1) comprising (V); (4) a host cell (V1) comprising (V) or (V1); (5) increasing (M2) the functional in vivo half-CC compusates, variants and protein C protein are useful as medicaments, CC and in the manifacture of medicaments for the treatment (and C diagnosis/prevention) of stroke, myocardial infarction, after venous CC thrombosis, disseminated intravascular coagulation (D1C), sepsis, septic c shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC respiratory distress syndrome (ARDS). The variant protein C has an CC increased resistance to activation by e.g. human plasma and alpha-1 CC antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced CC renal clearance, reduced immunogenicity and/or increased bioavailability. C administration of less nyotein, and fewer side effects. Moreover, a administration of less nyotein, and fewer side effects. Moreover, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-OCT-2000; 2000DK-00001560.

                                       administration of less protein, and fewer side effects. Moreover, a reduced anticoagniant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a conjugate (1) comprising at least one non-polypeptide molety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              15-OCT-2001; 2001WO-DK000679
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   25-APR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

The invention relates to a conjugate (I) comprising at least one non-CC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to CC a protein C polypeptide comprising an amino acid sequence which differs CT from that of a parent protein C polypeptide (III) in at least one CC introduced and/or at least one removed amino acid residue comprising an CC attachment group for the non-polypeptide group (e.g. an N-glycosylation CC site). Also included are (1) a variant (IV) of (III) comprising an CC substitution in a position (P) where (P) is an amino acid with at least CC systematical conformation of the surface, with the proviso that the CC systematical conformation of the surface, with the proviso that the CC systematical conformation of the surface, with the proviso that the CC systematical conformation of the surface, with the proviso that the CC systematical conformation of the surface, with the proviso that the CC systematical conformation of the surface, with the proviso that the CC systematical conformation of the surface, with the proviso that the CC systematical conformation of the sequence (V) encoding (CIV); (3) an expression vector (VI) comprising (V) (4) a host volument (CIV); (3) an expression vector (VI) comprising (VI) (4) a host cell (VII) (COMPRISING (VI)); (3) an expression vector (VI) comprising (VI) (4) a host volument (VII); (5) increasing (VI) the functional in vivo half-CC interesting (VI); (3) an expression vector (VI) comprising (VI) as host voluments, (CIV); (3) an expression vector (VI) comprising (VI); (4) a host voluments, (VII); (5) increasing (VII); (5) increa located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a administration of less protein, and fewer side effects Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant procein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bloavailability.
